

Word Processing -Microsoft Word

Introduction:

A **word processing** package is used to prepare and edit text. **Word processors** are used to create all types of documents such as letters, reports and essays. Using a **word processor**, you can type, revise and correct a document on the screen before printing it out.

Advantages of Word Processing:

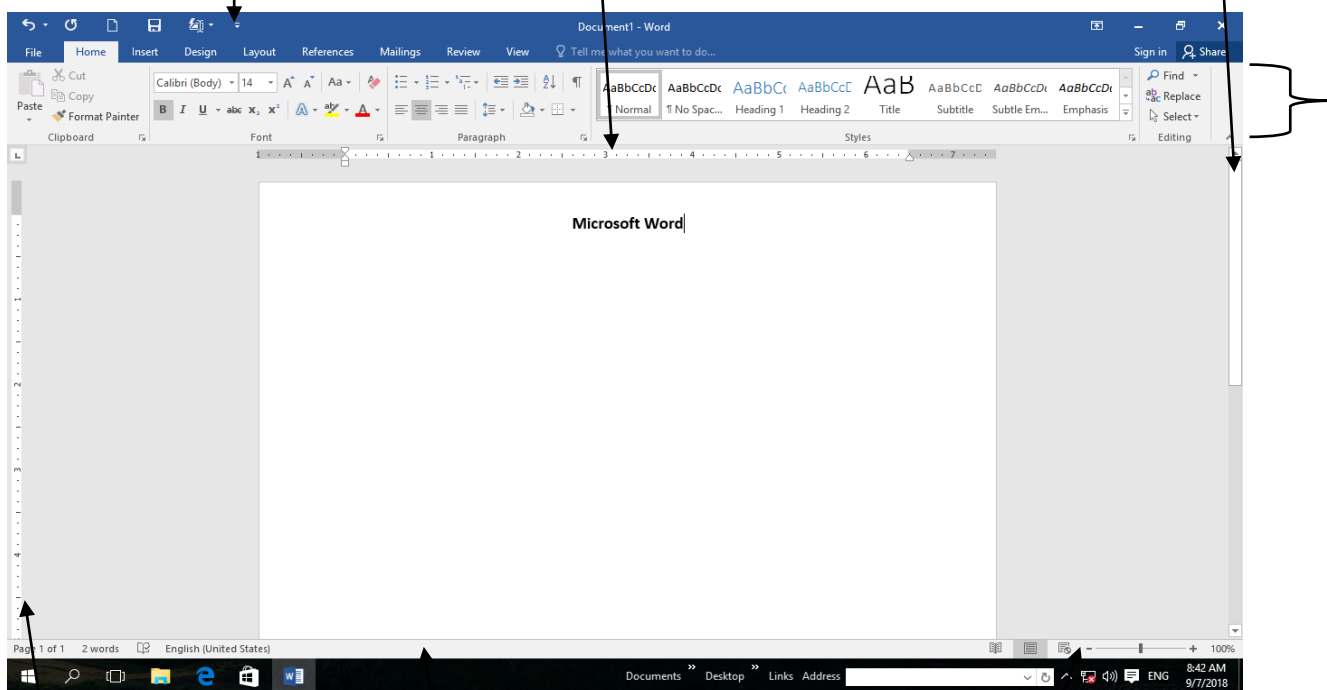

1. **Quality** : It produces error free documents. The spell and grammar check in word processing makes the document to be neat and error-free. We can get multiple copies of excellent formatted nature in word Processing.
2. **Storage of Text** : We can take any number of copies with word processor. Not only that, if we need the same document with some slight changes, we need not type the same letter again. Just by making some slight changes, we can obtain a modified copy easily.
3. **Time Saving** : We can get any number of copies of document in future without retyping. We can get the copy of document on any printer.
4. **Security** : We can protect the documents in word processing by giving passwords. So there is a less chance of viewing the documents by unauthorized persons.
5. **Dynamic Exchange of Data** : We can have dynamic exchange of objects and pictures from other documents into word processing documents. The documents can be linked to each other.

Screen Layout:

Quick Access Tool Bar

Horizontal Ruler

Scroll Bar

Vertical Ruler

Status Bar

Task Bar

Zoom Slider

Customize the Quick Access Tool Bar:

1. Go to the Quick Access tool bar → Click on the **Customize Quick Access tool bar** button → Click on the option you want to add or remove. If you don't get the word you want, click on **More Commands** → **Choose commands from** → Select the command you want from the left pane → Click on **Add** button to add the command to the right pane → It will be added to the Quick Access tool bar.
2. Right click on any place in the ribbon → Click on the **Customize Quick Access tool bar** button → Same procedure as above.

Creating a New Document:

1. File → New → Click on **Blank Document** or select any template
2. Press **CTRL + N** on the keyboard

Shortcut keys to move through a document:

Move Action	Keystroke
Beginning of the line	Home
End of the line	End
Top of the document	Ctrl + Home
End of the document	Ctrl + End

Saving a Document for the First Time:

1. File → Save/Save As → Select the location → Type a file name → Save
2. Ctrl + S → Select the location → Type a file name → Save
3. Quick Access Toolbar → Save → Select the location → Type a file name → Save

Saving a Copy:

A copy can be saved with a different name in the same location or in different locations with the same name.

1. File → Save as → Write a file name → Select the location → Save

Saving with a Password:

A password can be given to open or modify the document.

File → Save As → Select the location → Tools → General Options → Write a password to open or modify → OK → Reenter the password → OK → Save

Removing a Given Password:

File → Save As → Select the location → Tools → General Options → Delete the password given to open or modify → OK → Save

Closing a Document:

1. File → Close
2. Click on the close button
3. Right click on the task bar → Close
4. Alt + F4

Opening an Existing Document:

1. File → Open → Select the file or browse for the file and open it.
2. Ctrl + O → Select the file or browse for the file and open it.

Selecting Text:

Selection	Technique
Whole word	Double click on the word
Whole line	Keep the mouse pointer on the left margin of the document to get a white arrow and click the mouse to select the line.
Whole paragraph	Triple click on the paragraph
Several words or lines	1. Click and drag the mouse over the words 2. Hold down Shift while using arrow keys
Entire document	1. Home tab → Editing group → Select → Select All 2. Ctrl + A

To deselect,

1. click anywhere outside the selection
2. Press an arrow key on the keyboard

Deleting Text:

1. Select the block of text → Press **Delete** key
2. Keep the cursor at the beginning of the block of text to be deleted → Press **Delete** key to delete the letters one by one to the right (forward).
3. Keep the cursor at the end of the block of text to be deleted → Press **Backspace** key to delete the letters one by one to the left (backward).

Copy and Move Text or Any Object:

1. Select the text → **Home** tab → **Clipboard** group → **Cut/Copy** → Place the cursor on the new location → **Home** tab → **Clipboard** group → **Paste**
2. Select the text → Right click on the selected text → **Cut/Copy** → Right click on the new location → **Paste**
3. Select the text → Drag the text to the new location with the left mouse button → Release the mouse button → The text will be moved
4. Select the text → Drag the text to the new location with the left mouse button while pressing the **ctrl** key → Release the mouse button → The text will be copied
5. Select the text → Drag the text to the new location with the right mouse button → Release the mouse button → Move Here/ Copy Here
6. Select the text → **Ctrl + X** to cut/ **Ctrl + C** to copy → Place the cursor on the new location → **Ctrl + V** to paste

Find and Replace Text:

Find –

1. **Home** tab → **Editing** group → **Find** → Type the text to be found on the **Navigation** pane → All the relevant words in the whole document will be highlighted
2. **Home** tab → **Editing** group → **Find** → **Advanced Find** → **Find and Replace** dialog box → Type the text to be found in the **Find what** text box →
 - i. **Reading Highlight** → **Highlight All** → All the relevant words in the whole document will be highlighted
 - ii. **Find In** → **Main Document/Current Selection** → All the relevant words in the specified area will be highlighted
 - iii. Click **Find Next** to select the relevant words one by one

Replace –

- Home** tab → **Editing** group → **Replace** → Type the text to be found in the **Find what** text box → Type the word to be replaced in the **Replace with** text box →
- i. Click **Replace** button to replace the words one by one
 - ii. Click **Replace All** button to replace all words in the whole document
 - iii. Click **Find Next** to highlight the word and next click **Replace** button to replace the word

Switching between open files:

1. **View** → **Switch Windows** → Select the file you want
2. Click on the open file name on the task bar.

Document Views:

There are several ways to view the document in word.

1. **Read Mode** – This is a full length view of the document viewing two pages at a time.
2. **Print Layout** – This is a view of the document as it would appear when printed.
3. **Web Layout** – This view shows as it would appear in a web browser.
4. **Outline** – This is an outline form of the document in the form of bullets.
5. **Draft** – This view does not display pictures or layouts; just text.

Viewing a Document –

1. **View** tab → **Views** group → Select any option
2. Click on any view tool on the right side of the status bar.

Zooming a Document:

1. **View** tab → **Zoom** group → Select any option except **Zoom**
2. **View** tab → **Zoom** group → Select **Zoom** → **Zoom to** → Select any option or adjust any **Percent** → **OK**
3. Click on the **Zoom Level (100%)** button on the status bar → **Zoom to** → Select any option or adjust any **Percent** → **OK**

4. Use the **Zoom Slider** on the status bar to adjust any percentage

Page Setup:

Modify Page Margins:

1. **Layout** tab → **Page Setup** group → **Margins** → Select any option
2. **Layout** tab → **Page Setup** group → **Margins** → Select **Custom Margins** → **Margins** tab → **Margins** → Customize margins as you wish
3. **Layout** tab → Click on **Page Setup** group launcher → **Margins** tab → **Margins** → Customize margins as you wish

Select Orientation:

1. **Layout** tab → **Page Setup** group → **Orientation** → Select **Portrait / Landscape**
2. **Layout** tab → Click on **Page Setup** group launcher → **Margins** tab → **Orientation** → Select **Portrait / Landscape**

Select Paper Size:

1. **Layout** tab → **Page Setup** group → **Size** → Select any option
2. **Layout** tab → **Page Setup** group → **Size** → Select **More Paper Sizes** → **Paper** tab → **Paper Size** → Select any option → **OK**
3. **Layout** tab → Click on **Page Setup** group launcher → **Paper** tab → **Paper Size** → Customize **Width** and **Height** as you wish → **OK**

Font Formatting:

Change Case:

Home tab → **Font** group → **Change Case** button → Select any option

Bold / Italic / Underline Text:

1. Select the text → **Home** tab → **Font** group → Click on **Bold / Italic / Underline** button
2. Select the text → **Ctrl + B** for bold / **Ctrl + I** for italic / **Ctrl + U** for underline
3. Click on the **Font** launcher → **Font** tab →
 - i. Font style → **Bold / Italic** → **OK**
 - ii. Underline style → Select any style → If you want select any underline color → **OK**

Change Font Type / Font Size:

1. Select the text → **Home** tab → **Font** group → Click on **Font / Font Size** button → Select any option
2. Select the text → Click on the **Font** launcher → **Font** tab → Select any option from **Font / Font size** → **OK**

3. Select the text → **Home** tab → **Font** group → Click on **Increase Font Size / Decrease Font Size** to change the font size.

Change Font Color:

1. Select the text → **Home** tab → **Font** group → Click on the drop down button of the **Font Color** button → Select any color
2. Select the text → Click on the **Font** launcher → **Font** tab → Select any color from **Font color** → OK

Highlight Text:

Select the text → **Home** tab → **Font** group → Click on the drop down button of the **Text Highlight Color** button → Select any color

To remove the highlight color select the highlighted text → **Home** tab → **Font** group → Click on the drop down button of the **Text Highlight Color** button → Select **No Color**

Strikethrough / Subscript / Superscript Text:

1. Select the text → **Home** tab → **Font** group → Click on **Strikethrough / Subscript / Superscript** button
2. Select the text → Click on the **Font** launcher → **Font** tab → Effects → Check **Strikethrough / Subscript / Superscript** check boxes → OK

Paragraph Formatting:

Alignment:

1. Select the text → **Home** tab → **Paragraph** group →
 - i. Click on **Align Left** button to align the text to the left margin / Ctrl + L
 - ii. Click on **Centre** button to align the text to the Centre / Ctrl + E
 - iii. Click on **Align Right** button to align the text to the right margin / Ctrl + R
 - iv. Click on **Justify** button to align the text to both of the left and right margins / Ctrl + J

Bulleted and Numbered Lists:

Add Bullets to an Existing List –

- i. Select the existing list → **Home** tab → **Paragraph** group → Click on the **Bullets** button to apply the current bullet type.
- ii. Select the existing list → **Home** tab → **Paragraph** group → Click on the drop down button of the **Bullets** button → Select any bullet from the displayed ones.

- iii. Select the existing list → **Home** tab → **Paragraph** group → Click on the drop down button of the **Bullets** button → **Define New Bullet** → Select **Symbol / Picture** → Select any bullet → OK

Create a New List with Bullets –

- i. Place the cursor where you want the list in the document → **Home** tab → **Paragraph** group → Click on the **Bullets** button to apply the current bullet type → Type the list
- ii. Place the cursor where you want the list in the document → **Home** tab → **Paragraph** group → Click on the drop down button of the **Bullets** button → Select any bullet from the displayed ones
- iii. Place the cursor where you want the list in the document → **Home** tab → **Paragraph** group → Click on the drop down button of the **Bullets** button → **Define New Bullet** → Select **Symbol / Picture** → Select any bullet → OK

Add Numbers to an Existing List –

- i. Select the existing list → **Home** tab → **Paragraph** group → Click on the **Numbering** button to apply the current numbering type
- ii. Select the existing list → **Home** tab → **Paragraph** group → Click on the drop down button of the **Numbering** button → Select any numbering style from the displayed ones.

Create a New List with Numbering –

- i. Place the cursor where you want the list in the document → **Home** tab → **Paragraph** group → Click on the **Numbering** button to apply the current bullet type → Type the list
- iv. Place the cursor where you want the list in the document → **Home** tab → **Paragraph** group → Click on the drop down button of the **Numbering** button → Select any numbering style from the displayed ones

Nested Lists:

A **Nested List** is a list with several levels of indented text.

Create Multiple Levels in an Existing List –

- i. Create a bulleted or numbered list → Select the bulleted or numbered options which should go to the next level → **Home** tab → **Paragraph** group → Click on **Increase Indent** button (To remove the Indentation, Select the options → **Home** tab → **Paragraph** group → Click on **Decrease Indent** button)

- ii. Create a bulleted or numbered list → Select the bulleted or numbered options which should go to the next level → Press the **Tab** button (To remove the Indentation, Select the options → Press **Shift + Tab** buttons)

Create a New Nested List:

- i. Select a bullet or number style → Type the list → When you want to change the list level to the right, **Home** tab → **Paragraph** group → Click on **Increase Indent** button → Type the list → When you want to go to the earlier level, **Home** tab → **Paragraph** group → Click on **Decrease Indent** button → Type the list
- ii. Select a bullet or number style → Type the list → When you want to change the list level to the right, press **Tab** key → Type the list → When you want to go to the earlier level, press **Shift + Tab** keys → Type the list
- iii. Select a bullet or number style → Type the list → When you want to change the list level to the right, click on the drop down button of the **Bullets / Numbering** button → **Change List Level** → Change the list level

Indentation:

Indenting paragraphs allows you set text within a paragraph at different margins. There are several options for indenting.

1. **First Line Indentation** – Controls the left boundary for the first line of a paragraph.
2. **Hanging Indentation** – Controls the left boundary of every line in a paragraph except the first line.
3. **Left Indentation** – Controls the left boundary for every line in a paragraph
4. **Right Indentation** – Controls the right boundary for every line in a paragraph

Ways of Indenting:

1. Select the paragraph → Press **Tab** key to get the **Left Indentation**. To go backwards, select the paragraph → Press **Backspace** key
2. Select the paragraph → **Home** tab → **Paragraph** group → Click **Increase Indent** button to get the **Left Indentation**. To go backwards, select the paragraph → **Home** tab → **Paragraph** group → Click **Decrease Indent** button
3. **Layout** tab → **Paragraph** group → **Indent** → Set **Left / Right** indentations
4. Select the paragraph → Click on the paragraph launcher → **Indents and Spacing** tab → **Indentation** → Set **Left** or **Right** distance or from **Special** set **First Line** or **Hanging** distance → OK
5. Select the paragraph → Click on any indent controller on the ruler → Drag it to the location you want → Release the mouse button

Change Line Spacing:

1. Select the paragraph → **Home** tab → **Paragraph** group → **Line Spacing and Paragraph Spacing** button → Select any number option
2. Select the paragraph → **Home** tab → Click on the paragraph launcher → **Indents and Spacing** → **Line Spacing** → Select any option

Change Paragraph Spacing:

1. Select the paragraph → **Home** tab → **Paragraph** group → **Line Spacing and Paragraph Spacing** button → **Add Space Before Paragraph / Add Space After Paragraph**
2. Select the paragraph → **Home** tab → Click on the paragraph launcher → **Indents and Spacing** → **Spacing** → Change the space in **Before** or **After**
3. Select the paragraph → **Layout** tab → **Paragraph** group → **Spacing** → Set **Before / After**

Tab Settings:

The tab selector is above the vertical ruler. Hover over the tab selector to see the name of the type of tab that is active. The tab options are,

1. **Left Tab** – Moves text to the right as you type
2. **Centre Tab** – Centers text below the tab
3. **Right Tab** – Moves text to the left as you type
4. **Decimal Tab** – Aligns decimal numbers using the decimal point
5. **Bar Tab** – Draws a vertical line on the document.

Setting Tabs:

1. Click the tab selector above the ruler until the tab stop you wish to use appears → Click on the horizontal ruler to indicate the location → The tab stop will appear on the ruler → Use the **Tab** key to go to the relevant location → type the list
2. **Home** tab → Click on the **Paragraph** group launcher → **Tabs** button → Type the **Tab Stop Position** → Select any **Alignment** type → If you want, select a **Leader** → **Set** → **OK** → The tab stop will appear on the ruler → Use the **Tab** key to go to the relevant location → type the list

Add Borders:

1. Select the paragraph / paragraphs → **Home** tab → **Paragraph** group → Click on the drop down button of the **Borders** button → Select any bordertype
2. Select the paragraph / paragraphs → **Home** tab → **Paragraph** group → Click on the drop down button of the **Borders** button → **Borders and Shading** → **Borders** tab → Select any **Setting** → Select any **Style** → Select any **Color** → Select any **Width** → **Apply to** → Select the option you want → **OK**

Add Shading:

1. Select the paragraph / paragraphs → **Home** tab → **Paragraph** group → Click on the drop down button of the **Shading** button → Select any color
2. Select the paragraph / paragraphs → **Home** tab → **Paragraph** group → Click on the drop down button of the **Shading** button → **More Colors** → Select **Standard** or **Custom** tab → Select the color you want → **OK**
3. Select the paragraph / paragraphs → **Home** tab → **Paragraph** group → Click on the drop down button of the **Borders** button → **Borders and Shading** → **Shading** tab → **Fill** → Select any color → If you want, **Patterns** → Select any **Style** → Select any pattern color → **Apply to** → Select the option you want → **OK**

Document Formatting:

Styles:

Apply an Existing Style:

Select the text → **Home** tab → **Styles** group → Select any style

Create a New Style:

Select a text → Format it as you wish → Click the **More** button of **Styles** group → **Create a Style** → Type a **Name** for the style → **OK**

Copy Formatting:

If you have already formatted text the way you want it and would like another portion of the document to have the same formatting, you can copy the earlier formatting.

Select the text you have formatted already → **Home** tab → **Clipboard** group → Click on **Format Painter** button → Select the text you want to format

(If you want to apply the same formatting for several locations, double click on the **Format Painter** button and apply the same procedure.)

Add Page Borders:

1. **Design** tab → **Page Background** group → **Page Borders** → **Page Border** tab → Select any **Setting** → Select any **Style** → Select any **Color** → Select any **Width** → **Apply to** → Select any option → **OK**
2. If you want any art as the page border, **Design** tab → **Page Background** group → **Page Borders** → **Page Border** tab → Select any **Setting** → **Art** → Select any art → Set the **Width** as you want → **Apply to** → Select any option → **OK**
3. **Home** tab → **Paragraph** group → Click on the drop down button of the **Borders** button → **Borders and Shading** → Same procedure as above.

Add Page Color:

Design tab → **Page Background** group → **Page Color** → Select any color

Add Watermark:

Apply an Existing Watermark –

Design tab → **Page Background** group → **Watermark** → Select any style

Create a New Watermark –

1. **Design** tab → **Page Background** group → **Watermark** → **Custom Watermark** → **Select Picture Watermark** → **Select Picture** → Browse for a picture → **Insert**
2. **Design** tab → **Page Background** group → **Watermark** → **Custom Watermark** → **Select Text Watermark** → **Text** → Select a given text or type a new text → Select any **Font, Size, Color** and **Layout** → **Apply** → **OK**

Add Drop Cap:

1. Select the text → **Insert** tab → **Text** group → **Drop Cap** → Select **Dropped / In Margin**
2. Select the text → **Insert** tab → **Text** group → **Drop Cap** → If you want to format the selected text, select **Drop Cap Options** → **Position** → Select **Dropped / In Margin** → **Options** → Format **Font, Lines to Drop** and **Distance from Text** as you want.

Create a Page Break:

1. **Layout** tab → **Page Setup** group → **Breaks** → **Page**
2. **Insert** tab → **Pages** group → **Page Break**

Insert a Blank Page:

Insert tab → **Pages** group → **BlankPage**

Insert a Cover Page:

Insert tab → **Pages** group → **CoverPage** → Select any style

Add Header and Footer:

Insert tab → **Header & Footer** group → Select **Header / Footer** → **Header / Footer Design** tab will display on the ribbon → Edit the header or footer as you wish → Click on **Close Header & Footer** button

Page Numbering:

Insert tab → **Header & Footer** group → **Page Number** → Select any location → Select any style

Add Symbols and Special Characters:

Place the cursor on the document where you want the symbol → **Insert** tab → **Symbols** group → **Symbol** → Select a given symbol or click on **More Symbols** → Browse for the symbol you want → **Insert**

Create Columns:

Create Columns with an Existing Text –

1. Select the text → **Layout** tab → **Page Setup** group → **Columns** → Select any option
2. Select the text → **Layout** tab → **Page Setup** group → **Columns** → Click on **More Columns** → **Presets** → Select any option or set **Number of Columns** → If you want, set **Width and spacing** → If you want, select **Line between** → **Apply to** → **Selected text** → **OK**

Create Columns Before Typing the Text –

Layout tab → **Page Setup** group → **Columns** → or click on **More Columns** → **Presets** → Select any option or set **Number of Columns** → If you want, set **Width and spacing** → If you want, select **Line between** → **Apply to** → **This Point Forward** → **OK** → Type the text

Insert Column Breaks –

1. Type the text in the column → **Layout** tab → **Page Setup** group → **Columns** → Click on **More Columns** → **Apply to** → **This point forward** → **Start NewColumn** → **OK**
2. Type the text in the column → **Layout** tab → **Page Setup** group → **Breaks** → **Column**
3. Type the text in the column → Press **Ctrl + Shift + Enter** keys

Clear All Formatting:

1. Select the text → **Home** tab → **Font** group → Click on **Clear All Formatting**
2. Select the text → **Home** tab → Click on the drop down button of the **Styles** group → **Clear Formatting**

Tables:

Creating Tables:

1. **Insert** → **Tables** group → **Table** → Highlight the number of rows and columns and click on it
2. **Insert** → **Tables** group → **Table** → **Insert Table** → **Table Size** → Give the **number of rows** and **columns** → **OK**
3. **Insert** → **Tables** group → **Table** → **Draw Table** → Mouse pointer will convert to a picture of a pencil → Click the mouse on the page where you want the table and draw the table
4. **Insert** → **Tables** group → **Table** → **Quick Tables** → Select any template

Insert Columns and Rows:

1. Select the column or row next to where you want the new column or row → **Table Tools** tab → **Layout** tab → **Rows & Columns** group → **Insert Above** / **Insert Below** / **Insert Right** / **Insert Left**

2. Select the column or row next to where you want the new column or row → Right click on the selected area → **Insert** → **Insert Columns to the Left** / **Insert Columns to the Right** / **Insert Rows Above** / **Insert Rows Below**

Delete Columns / Rows / Table:

1. Select the column or row / table you want to delete → **Table Tools** tab → **Layout** tab → **Rows & Columns** group → **Delete** → **Delete Columns** / **Delete Rows** / **Delete Table**
2. Select the column or row / table you want to delete → Right click on the selected area → **Delete Columns** / **Delete Rows** / **Delete Table**

Increase and Decrease Row Height / Column Width:

1. Keep the mouse on the line of the row or column → The mouse pointer will convert to a symbol like this  → Then click the mouse and drag the line to increase or decrease the row height / column width → Release the mouse button
2. Select the row or column → **Table Tools** → **Layout** tab → **Cell Size** group → Adjust **Height** or **Width** as you wish
3. Select the row or column → **Table Tools** → **Layout** tab → Click on the **Cell Size** group launcher → **Row / Column** tab → Specify **Height** or **Width** as you wish
4. Select the row or column → Right click on the selected area → **Table Properties** → **Row / Column** tab → Specify **Height** or **Width** as you wish

Merge Cells:

1. Select the cells you want to merge → **Table Tools** → **Layout** tab → **Merge** group → **Merge Cells**
2. Select the cells you want to merge → Right click on the selected area → **Merge Cells**

Split Cells:

1. Select the cell/cells you want to split → **Table Tools** → **Layout** tab → **Merge** group → **Split Cells** → Specify the **Number of Columns** and **Number of Rows** → **OK**
2. Select the cell/cells you want to split → Right click on the selected area → **Split Cells** → Specify the **Number of Columns** and **Number of Rows** **OK**

Split Tables:

1. Select the row from which you want to split the table → **Table Tools** → **Layout** tab → **Merge** group → **Split Table**

Align the Text in a Cell:

Select the text → **Table Tools** → **Layout** tab → **Alignment** group → Click on the alignment you want

Change Text Direction:

Select the text → **Table Tools** → **Layout** tab → **Alignment** group → Click on the **Text Direction** button until you get the direction you want

Divide the Rows / Columns in Equal Height / Length:

Select the rows / columns → **Table Tools** → **Layout** tab → **Cell Size** group → **Distribute Rows / Distribute Columns**

Add Table Styles:

Select the table → **Table Tools** → **Design** tab → **Table Styles** group → Select any style

Add Border Styles:

1. Select the table → **Table Tools** → **Design** tab → **Borders** group → **Border Styles** → Select any style → **Pen Color** → Select any color → Select any **Line Weight** → Draw the border
2. Select the table → Right click on the selected area → **Border Styles** → Select any style → Draw the border
3. Select the table → **Table Tools** → **Design** tab → Click on the **Borders** group launcher → **Borders** tab → Select a **Setting** → Select a **Style** → Select a **Color** → Select a **Width** → **Apply to** → Select the option you want → **OK**

Add Shading Color to a Cell / Row / Column / Selected Area / Table:

1. Select the cell / cell range you want → **Table Tools** → **Design** tab → **Table Styles** group → **Shading** → Select any color
2. Select the cell / cell range you want → **Home** tab → **Paragraph** group → Click the drop down button of the **Shading** button → Select any color

Graphics:

Insert Pictures:

Insert tab → **Illustrations** group → **Pictures** → Browse and select a picture → **Insert**

Format Pictures:

1. Select the picture → **Picture Tools** tab → **Format** tab → Format the picture as you wish
2. Right click on the picture → **Format Picture** → Use the tabs to format picture as you wish

Change the color of the picture:

Select the picture → **Picture Tools** tab → **Format** tab → **Adjust** group → **Color** → Select any color

Add Picture Styles:

Select the picture → **Picture Tools** tab → **Format** tab → **Picture Styles** group → Select any style

Add Picture Border:

Select the picture → **Picture Tools** tab → **Format** tab → **Picture Styles** group → **Picture Border** → Select any **color**, **Weight** and **Dash Style**

Add Picture Effects:

Select the picture → **Picture Tools** tab → **Format** tab → **Picture Styles** group → **Picture Effects** → Select any effect → Select any option

Position the Picture on the Page:

1. Select the picture → **Picture Tools** tab → **Format** tab → **Arrange** group → **Position** → Select any position
2. Right click on the picture → **Size and Position** → **Position** tab → **Horizontal** → Select and change the **Absolute Position** → **Vertical** → Select and change the **Absolute Position** → **OK**

Wrapping Text Around the Picture:

1. Select the picture → **Picture Tools** tab → **Format** tab → **Arrange** group → **Wrap Text** → Select any option
2. Right click on the picture → **Wrap Text** → Select any option

Bring Pictures Forward and Backward:

1. Select the picture → **Picture Tools** tab → **Format** tab → **Arrange** group → Click on the drop down button of **Bring Forward** or **Send Backward** buttons → Select the option you need from it.
 - i. **Bring to Front** brings the object in front of all objects.
 - ii. **Bring Forward** brings the object above from one step.
 - iii. **Send to Back** sends the object below all objects.
 - iv. **Send Backward** sends the object below from one step.
2. Right click on the picture → **Bring to Front / Send to Back** → Select the appropriate option.

Align the Picture on the Page:

Select the picture → **Picture Tools** tab → **Format** tab → **Arrange** group → **Align** → Select any option

Rotate the Picture:

1. Select the picture → **Picture Tools** tab → **Format** tab → **Arrange** group → **Rotate** → Select any option

2. Select the picture → Click on the  symbol of the selected picture and rotate it to the direction you want

Resize the Picture:

1. Select the picture → **Picture Tools** tab → **Format** tab → **Size** group → Change the **Shape Height** and **Shape Width**
2. Select the picture → Drag in / out from the **Resizing Handles** to change the size of the picture

Crop pictures:

1. Select the picture → **Picture Tools** tab → **Format** tab → **Size** group → **Crop** → Drag the handles in, to crop the picture
2. Right click on the picture → **Crop** → Drag the handles in, to crop the picture

Group Pictures:

1. Select the pictures → **Picture Tools** tab → **Format** tab → **Arrange** group → **Group** → **Group**
2. Select the pictures → Right click on the selected pictures → **Group** → **Group**
